

Self introduction

- **Name** : Sri Charan Budamagunta
- **College**:Gokaraju rangaraju institute of engineering and technology
- **Branch** :EEE

Info about github

- **Username** : sriicharannn

Info about Heroku

- **Username** : Sri Charan

ML model

- Sklearn
- decisionTreeClassifier

Steps in deployment of web app

1. creating repositories-iris
2. creating procfile
3. creating app.py file
4. creating requirements.txt file
5. creating setup.sh file
6. creating new app in Heroku -iris detector
7. connecting to github and adding iris repository
8. enabling automatic deploys
9. selecting overview in **github** making little changes in app.py file using edit option and commit changes
10. **in Heroku** in the overview tab clicking on view build progress
11. after it gets deployed we get the website link

url to webapp: <https://iris90.herokuapp.com/>
